# Mission Statement

---

At Victor Marine Ltd, we understand that the foundation of any successful business relationship lies in getting the fundamentals right, regardless of the industry you work within.

## OUR MISSION

“Through dedicated customer focus, value and service, our goal is to be your established long-term partner in capital, equipment supply, ongoing supporting spares and consumables, commissioning and servicing”

## OUR VISION

“Our vision is to continue to grow our business by becoming leaders in the manufacture and supply of Oily Water Separators, marine STP, Gas Freeing Fans and Tank Washing equipment”.

## OUR VALUES

The whole is so much more than the sum of its parts.  
We strive for:

**Passion and responsibility in all we undertake.**

**A commitment to quality and delivery, on schedule.**

**Collaboration with our stakeholders.**

**Excellence in all we do.**

## Victor Marine – a brief history

---

Victor Marine Ltd are specialists in the design and manufacture of oily water separators, tank washing machines, sewage treatment plants and gas freeing fans.

Formed in 2005 from the merger of two established brands in the marine industry, namely Victor Pyrate Ltd and Hodge Separators Ltd, the company has over 100 years of experience in supplying equipment to the marine industry.

Victor Marine is an autonomous company within the Samuel Hodge Group, a British engineering company founded in 1897, with its origins in ship repairing and machine tool rebuilding.

Today, leading the field from its UK headquarters, Victor Marine has forged relationships with representatives worldwide to provide shipbuilders, operators and owners with the most respected and reliable products in the marine industry, including totally bespoke packages, full customer support and unrivalled after-sales service.

Victor Marine's cutting edge range of equipment is currently supplied to a wide variety of global customers.

# Victor Marine timeline

1897

Formation of Samuel Hodge Limited

1900

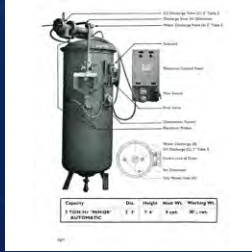

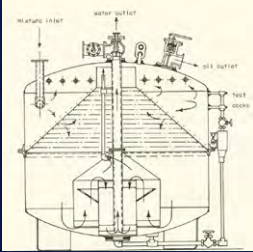

The Samuel Hodge Group

With its origins in ship repairing and machine tool rebuilding, Samuel Hodge is a privately owned British group of engineering companies, with a long history of supplying quality products world-wide. The group's activities, which encompass four operating companies, offer a wide diversity of products and services.

1925

Hodge Separators was formed and produced the first 'VICTOR' Marine Oily Water Separator

1910

1920

1930

1940

1950

1954

OILPOL introduces 100ppm requirement

1951

Hodge relocated to Falmouth site

1976

Receives Queens Award for Export

1970

1960

1972

Acquires Pyrate Inc.

1953

Victor Pyrate was formed and opened on South Ockendon site, supplying tank washig equipment

1983

MARPOL 73/78 entered into force

1985

Launch of VP1350 portable gas freeing fan

1986

Received Queens Award for Export

1990

1979

Resolution A.446(XI) entered into force, Victor Pyrate assists in writing the IMO resolution 1980: VP Major

Relocated to purpose-built Essex site

2010

2013

VM develops Sewage Treatment Plant FBBR Series and is certified to IMO MEPC 159(55)

2015

Sewage Treatment Plant FBBR Series certified to IMO MEPC 227(64)

2017

Launch of GF700 & GF1400 gas freeing fans

2005

Formation of Victor Marine Ltd.

1994

IMO MEPC 60(33) enters into force

2004

Launch of all stainless steel VP1500 gas freeing fan for chemical/product tankers

2010

1980

1980

VP Major & VP Minor certified by Lloyds Register

1987

Launch of improved VP Minor Mk 3 stainless steel tank cleaning machine

2000

2003

Launch of new version VP1350 Mk 5 gas freeing fan

2020

2019

Move to new Chesterfield site

1985

Launch of Victor MiniSep MS Series certified to IMO MEPC 60(33) - over 6000 sold worldwide

2004

Launch of our first air driven gas freeing fan VP950

2007

Launch of CS Series certified to IMO MEPC 107(49) as regulation enters into force

1977

The 'VICTOR' OWS is approved to IMO Resolution A.393(X) - 15PPM Standard

# Tank Washing Machines

Tank washing is a vital part of a ship's operations and it is essential that the equipment on-board is reliable and fit for purpose. Failure to clean the tanks thoroughly can result in delays, large insurance claims and can even cause pollution. Victor Marine can offer twin nozzle tank washing machines, together with a whole range of ancillary equipment needed to operate each product which will help to avoid any of the above problems. We have a long tradition of supplying robust and efficient equipment and are proud of the reputation we have built up and retained within the worldwide marine market.

Victor Pyrate has been involved in tank washing since the formation of the company in the early 1950's and the recognition we have gained is in no small way due to our active involvement in the writing and implementation of the crude oil washing (COW) regulations during the 1970's.

We strive to uphold this hard earned reputation by continuously developing new products and improving existing ones.

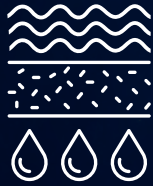

## Gas Freeing Fans

Victor Marine offer a range of water and air driven portable fans which can be used to free gas from the tanks of VLCC's down to the smaller and more sophisticated product and chemical carriers. Gas freeing on-board ships is carried out for various reasons including change of cargo, health and safety and tank maintenance. It is essential that it is done efficiently and safely.

Our range of gas freeing fans all have ATEX (Category 2) approval, intended for use in potentially explosive atmospheres, making them ideal for a wide range of applications. These three factors are paramount in the design, manufacturing and development of the fans and is therefore reflected in both their performance and reputation. Our fans compliment the tank washing business and are still marketed under the Victor Pyrate brand name - one of the best known and respected names in the marine market.

## Product range

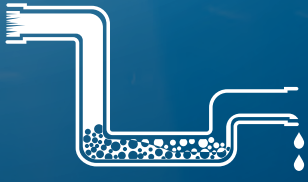

# Oily Water Separators

Bilge water on-board ships must be treated to the required international standard of 15ppm oil content before being discharged to the environment. Currently over 16% of all oil pollution discharges are caused by bilge water, thus oily water treatment is critical to maintain a safe and cleaner marine environment and is imperative to preserve marine life.

Probably the first company in the world to appreciate the need to reduce the amount of oil being discharged into the sea, Hodge Separators (Victor Marine), formed in 1925, have ever since remained a world leader in oil separation, by producing equipment to help to combat oil pollution. With over 7,000 units currently in operation on ferries, warships, cruise ships, tankers and yachts, Victor Marine have the experience to find a solution to your bilge problems. Our current range of bilge oily water separators have been developed to comply with the latest IMO regulations MEPC 107(49), whilst ensuring that the unit is economical, reliable and robust.

# Sewage Treatment Plants

Victor Marine's FBBR Series (Fixed Bed Biofilm Reactor) Biological Sewage Treatment Plant has been developed using the extremely well proven and compact fixed biofilm technology. The FBBR biozone uses a fixed honeycomb matrix which is specially designed to maximise the bioactivity efficiency, thus allowing for a smaller footprint and reducing cost.

The system has been approved to the latest IMO standard MEPC 227(64) (excluding section 4.2) and MEPC 159(55) and also certified by BV to EC MED Mod B+D. It is a three-stage sewage treatment system which can process from a gravity or vacuum feed. Supplied with the latest touch-screen HMI display and PLC, the plant can be easily monitored and controlled making the system very operator friendly.
